

## Civil and Environmental Engineering Department

## Homework presentation. Being this format as the

on, it will be some sound nature to you and your ability to communicate technical solutions  
 meet professional standards well before you graduate.

1. All submitted assignments should include at the top of the first page the statement "I pledge to the ODU Honor Code" followed by your signature. The ODU Honor Code is in force at all time. It is an honor code violation to copy the work of others and submit it as your work.
2. The homework solutions that you submit should stand on their own (i.e. anyone reviewing your submittal should be able to understand the solution). This information is then followed by a description of the problem. The description should be stated early in the solution. This information is then followed by a list of steps that often occur in a series of steps with each step

9. Your solution of an engineering problem should be neat and well space so that the individual steps can be easily followed. For problems with engineering calculations, engineering paper should be used. When drawing a Mohr's circle, a compass must be used.
10. Use a straight edge to draw lines and a French curve, flexible curve, or other curved objects when drawing curves. Where a circle is required (e.g., Mohr's circle analysis) a compass should be used.
